

TOUGHBOOK VOICE PICKING SOLUTIONS

Take your voice picking operations further with TOUGHBOOK

A complete voice solution from Panasonic designed for efficient voice picking applications. The solution consists of the TOUGHBOOK N1 4.7" Android TM handheld, dedicated N1 holster with shoulder strap and Bluetooth headset. The TOUGHBOOK N1 with angled barcode reader protects users from repetitive strain and enhances productivity and the N1 holster, attached to a belt or the supplied shoulder strap, allows the user to use both hands for picking with the device remaining within arm's reach. The Bluetooth headset connects effortlessly with the N1 device to facilitate voice input when used with voice-enabled software applications.

Key Features

TOUGHBOOK N1*

- Qualcomm® SDM660-2 Processor
- Android 8.1

*for full specifications please refer to product spec sheets.

TOUGHBOOK

TOUGHBOOK VOICE PICKING SOLUTIONS

Enhance your voice picking solution further with these additional options.

PROGLOVE

Warehouse operations can be optimised further when a ProGlove MARK 2 scanner, worn on the ProGlove Index trigger, is also introduced, enabling a more efficient, ergonomic and higher-speed method of scanning to the solution. The MARK 2 scanner is easily connected via Bluetooth to your TOUGHBOOK device and the scanning function is activated through a textile trigger located on the side of the index finger on the glove.

For more information on our ProGlove range, please contact proservices@eu.panasonic.com.

TOUGHBOOK Omnia

Take your productivity further with a bespoke TOUGHBOOK Omnia voice enabled application, powered by MCL Voice, designed specifically for your business process. A custom designed voice-enabled application means your workers have their hands free and their eyes fully on the task in hand. MCL Voice software can be fully integrated with your back-end systems and the BI plug-in means operational data is available in real-time.

With TOUGHBOOK Omnia the development, testing and deployment of customised, line-of-business software applications is reduced to days or weeks rather than months – much faster than using a traditional software house or internal native development.

TOUGHBOOK Omnia, can open the door to immediate, visible productivity improvements across your mobile IT estate and applications are built once and easily deployed to any form factor or operating system, meaning your investment is future-proofed.
